

This is not yet another Whitepaper

Unlike most whitepapers out there, we preferred to stay focused on the value and the sustainability of the project rather than bombarding the reader with endless text seldom read.

A whitepaper is meant to be brief. If one needs 10+ pages to explain and convince others, there we see a lack of efficiency and effectiveness.

As once Albert Einstein put forth, “If you can't explain it to a six-year-old, you don't understand it yourself.”

This is exactly how we would like to reach out to our intended community - those who focus and favor honesty over veneering.

Yet, the interested reader will find at the end of this document the means to reach us should s/he seek further explanations.

Manifesto

Azack.Games is a FinTech Platform where GAMING, ART, and FINANCE meet for FUN & VALUE.

We at Azack.Games are firm believers of VALUE.

This notion of VALUE must represent SOLID FOUNDATION, STAMINA, SPEED, and SUSTAINABILITY.

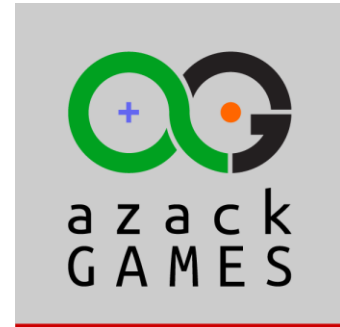

Thus, we planned, developed, and strategized our business model on real-life terms economic fundamentals and techniques.

We spent months meeting with experts in the field; listening to what they have examined over the years, conducting SWOT Analyses on both successful and unsuccessful examples out there in the Web3 field, and debating on what would be economically feasible, rational, and surely not dull.

Anything and everything you see here at Azack.Games have been built on Mathematical and Statistical Modeling Principles, and further subjected to Stress Tests based on real-life inputs and outcomes.

Azack.Games NFT Economy and GAME Economy - a first and only in the industry - uniquely complement each other in terms of FUN & VALUE.

You are more than welcome to contact us directly to gain further insight into Azack.Games, and ask any and every question you may have.

All of our Team will pleasantly attend a meeting with you.

Executive Summary

Azack.Games initially to be launched on mobile platforms will soon also expand to PCs and Consoles.

The arcade machines-based gaming spirit of the late 1970s and 1980s has been chosen to be the main theme for the launch phase.

However, the theme surely is not to be limited to just the retro spirit, but also the current times, and the future will ever be present.

The main reason for launching Azack.Games on mobile platforms is due to the fact that the acquisition and the measurement of user metrics are far more rapid and extensive when compared to PC and Console based games.

This data will then primarily be used to best target the appropriate PC and Console based gamers.

There will be several arcade games of different genres just as were in the late 1970s and 1980s authentic arcade game salons.

Gamers will have the option to play freely and/or with entry tokens.

Those who play with entry tokens will be eligible to receive monetary gains which will not be the case for free entries.

The unique and exclusive inherent value and economic model of Azack.Games is the exponential monetary gains in the lowest gaming periods.

The NFT Collections act as one of the means to eligibility and entry into the exponential monetary gains just like tokens.

Thus, both the NFT Collections and the Games complement each other.

What is offered uniquely and exclusively at Azack.Games

GAME LIKE A PRO, EARN LIKE A PRO
MULTIPLE X GAINS IS THE STANDARD HERE
ONLY SKILLS COUNT
NO ROOM FOR LUCK
HOURLY & DAILY GAMES
WIN ON THE DAY
GET PAID ON THE DAY

The Inherent Value of Azack.Games

Azack.Games is intended to be a borderless community-based FinTech platform with Fun, Finance, and Art at its core.

The Economic Model of Azack.Games

What the Community brings in, the Community receives back in exponential terms.

The Sustainability of the Value and Economic Model of Azack.Games

Let's spell this out in very simple, short and swift mathematical terms:

Just 120 (OneHundredAndTwenty) daily gamers (those who enter with tokens - not free entries) are sufficient to keep the economic model running crisply.

We're not kidding! PERIOD.

The Mathematical and Statistical Models utilized in developing and testing the Economic Model of Azack.Games

Industry-standard mathematical and statistical modeling and proofing tools have been utilized.

The stress tests conducted throughout the path from the idea to the implementation phases of Azack.Games

We investigated a considerable number of projects; both successful and unsuccessful.

Conducted SWOT Analyses on their Whitepapers, Roadmaps, and Operations.

Our conclusion; only a very few projects had put forth honest declarations that met their targets in real-life outcomes.

Most projects did not have the required backing arguments to meet the veneered targets exhibited in their Whitepapers.

NFT Economy

Azack.Games NFT Economy has been developed with the core value of sustainability.

This sustainability - a first and only in the industry - is achieved with the uniquely complementing function of GAME Economy.

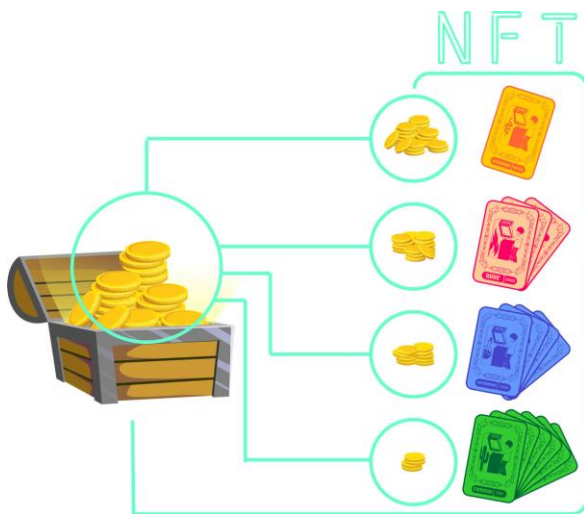

Passive Income is the nucleus of the model.

Towards the creation and distribution of this Passive Income, unique NFT Collections have been developed; each representing a value-added, marginal gain accruing financial asset.

These NFT Collections do not just represent art value, but also, and most importantly are means to entering the GAME Economy, and creating exponential monetary gains.

The rarity attribution within the First NFT Collection will affectrely on the Passive Income factor.

The below chart outlines the Passive Income Model of the First NFT Collection.

The first and only highest yield-bringing passive income model based on exponential gains never seen before.

At Azack.Games, we feel obliged to contribute to the well-being of humanity.

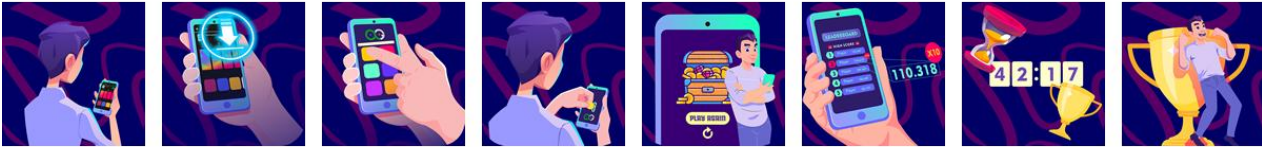

We will reserve 25% of the royalty fees as goodwill share. A separate wallet account will be created and assigned to the meta data of each NFT Collection.

As the monetary value in this wallet reaches a certain level, we will ask our community which international aid organization they would like this money to be donated.

GAME Economy

Azack.Games GAME Economy has been developed with the core value of FUN & FINANCE.

Monetary gains which are immediately available to cash out (subject to security measures) are achieved in exclusively short play times (10 minutes), and in exponential ratios (5-100x).

Tokenomics

We have long been observing both prominent and evolving projects in the Web3 space, and certainly their economic models.

Token creation and implementation have been fashionable means of economic value creation and gains.

However, as can be clearly seen with the swings and falls within the crypto assets space, seldom have projects stood boldly with just tokens as their primary and only indeed source of income.

Briefly, the Web3 space is full of unsustainable economic models relying mainly on tokenomics with no true solid foundations.

What is the case with Azack.Games then?

The answer may come as a surprise to you indeed.

‘We shall see.’

We have taken a completely different approach to the design, creation, and implementation of Azack.Games tokenomics.

Rather than, relying on hypothetical and referenced models from irrelevant projects within the Web3 space - which unfortunately most projects have done and still are doing so - we will walk the path first with no predetermined and/or limited concepts, and rigid borders, we shall observe, analyze, filter, pull ourselves back, and then act in developing.

The foundations of this process (observe, analyze, filter, pull back, act) will be the experience, knowledge, and know-how accumulated from Azack.Games’ unique NFT & GAME Economic Models are detailed in this document.

Thus, the core requirement of meeting real-life conditions, and withstanding stress tests shall be met.

We have taken the critical decision - not a very common one in the industry in fact - to transparently collect, record, and exhibit data and metrics accumulated throughout the life of our tokenomics design & development phase.

Surely the failures and successes together.

We shall be disclosing all this to our community to their knowledge and presence in co-developing by means of active polls.

The Azack.Games tokenomics has at its core the following traits; monetary value, store of value, proof of work.

We will further be focusing on eliminating manipulative acts on Azack.Games tokenomics in financial markets to protect the token's inherent value and its utility.

The Team

Azack.Games is powered by a diverse number of unique characters ranging from 26 to 52 years, with vast international experience.

Passion, discipline, and collaboration are the bonding assets.
